Journal of Computational Physics

Volume 112, 1994

ACADEMIC PRESS, INC.
Harcourt Brace & Company
San Diego New York Boston London Sydney Tokyo Toronto

approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editors' discretion. Articles and any other material published in the ***Journal of Computational Physics*** represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editors and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Authors may suggest a member of the Board of Editors to handle the review of their paper, and may also suggest the names of six suitable referees.

Form of manuscript. Manuscripts should be typewritten with wide margins on high quality 8.5 × 11-in. bond paper, using double spacing throughout. If larger paper must be used, the text must still be within these dimensions. Six copies should be submitted in order to expedite handling of manuscripts. Figures and tables must be included in all copies.

Each page of the manuscript should be numbered consecutively. *Page 1* should contain the article title, author, and coauthor names with complete affiliation(s). At the bottom of this page should appear the subject classifications and key words (see below). *Page 2* should contain a proposed running head of less than 50 characters. It should also contain the name and complete mailing address of the person to whom proofs are to be sent. *Page 3* of full articles should contain a short abstract.

All submitted papers will be scrutinized for length, particularly if they exceed 12 journal pages in length (including graphs, tables, references, etc.) and if the author has published in the Journal within the previous year.

Notes. Short notes of 6 pages or less (including figures, tables, and references but excluding title pages) regarding the availability of interesting and useful new programs or tabular material will be considered for publication. Letters to the Editor commenting on articles already published in this Journal will also be considered. Neither notes nor letters should have an abstract.

Subject classification. Authors are required to classify their own manuscripts using the 1980 *Mathematics Subject Classification*, 1985 revision, reprinted in the 1987 *Mathematical Reviews Index* and/or from the additional classifications listed in the January 1989 issue of ***Journal of Computational Physics***. Authors are requested to choose at least two categories—one in numerical analysis category 65, and one other (generally a physical classification) from the categories beyond 65. Also include a few key words.

Tables. Number tables consecutively with Roman numerals. Extensive tables will be reproduced photographically and should be typed carefully in the **exact** format desired. Authors will be charged for any new photoreproductions necessitated by changes in proof. Use superscript lowercase *italic* letters for table footnotes, which should be typed immediately below the table. Type tables at least double-spaced, including titles and footnotes. Do not underline table titles; reserve underlining for text that is to be *italicized.*

Equations. Equations should be typewritten whenever possible and the number placed in parentheses at the right margin. Reference to equations should use the form "Eq. (3)" or simply "(3)." Superscripts and subscripts should be typed or handwritten clearly above and below the line, respectively. Use the exponent $^{1/2}$ whenever possible.

References. References should be cited in the text by a number in square brackets. Literature cited should appear on a separate page at the end of the article and should be styled and punctuated according to the standards of the American Physical Society and using standard abbreviations for journals (see *Chemical Abstracts Service Source Index*, 1989). For unpublished lectures of symposia, include title of paper, name of sponsoring society in full, and date. Abbreviation of DOE Laboratory report names should follow the style of *Nuclear Science Abstracts*. Give titles of unpublished reports with "(unpublished)" following the reference. See the following examples:

1. Z. Wang and B. E. Richards, High resolution schemes for steady flow computation, *J. Comput. Phys.* **97**, 53 (1991).
2. I. Gohberg, P. Lancaster, and L. Rodman, *Matrix Polynomials* (Academic Press, New York, 1982), p. 54.
3. R. Gross, M. Koyanagi, H. Seifert, and R. P. Huebener, Article title, in *Proceedings, 17th Int. Conf. on Low Temperature Physics, Karlsruhe, West Germany, 1984*, edited by U. Eckern *et al.* (North-Holland, Amsterdam, 1984), p. 431.

Footnotes. Footnotes in the text should be avoided if at all possible. If they must be used, identify by superscript numbers and type together on a separate page, double-spaced.

Figures. All illustrations are to be considered as figures. Number each graph or drawing in sequence with Arabic numerals. Supply a descriptive legend for each figure. Type legends double-spaced consecutively on a separate page. All figures should be planned to fit the proportions of the printed page ($7\frac{1}{8} \times 9$ inches). All illustrations should be in finished form suitable for reproduction and no larger than 8.5 × 11 inches. Lettering on drawings should be of professional quality or generated by *high-resolution* computer graphics and should be large enough (10–12 points) to take a reduction of 50 to 60%. Freehand, penciled, or typewritten lettering is not acceptable. Drawings should be made with the equivalent of black India ink on tracing linen, smooth-surface white paper, or Bristol board. Alternatively, *high-quality* computer graphics may be acceptable. *Symbols used to identify points within a graph should be large enough that they will be easily distinguishable after reduction.* Plot graphs on blue coordinate or white paper. Grid lines that are to reproduce must be shown in black. All drawings may be submitted as glossy prints. Identify each figure in a margin with the name of the journal, author's name, and figure numbers; avoid marking the backs of figures.

Proofs and Reprints

Proofs. Proofs will be sent to the author with a reprint order form. Authors will be charged for alterations in excess of 10% of the cost of composition.

Reprints. Fifty reprints without covers will be provided free of charge. Additional reprints may be purchased.

Personal Computer Disks

Manuscripts may be submitted to ***Journal of Computational Physics*** on personal computer disks after the manuscript has been accepted and after all revisions have been incorporated onto the disk. Label the disk with the type of computer used, the type of software and the version number, and the disk format. All tabular material will be typeset conventionally. Art must be prepared as camera-ready copy; see the section on Figures earlier in this Information for Authors.

A hard copy printout of the manuscript that exactly matches the disk file must be supplied. Academic Press will not accept disks without accompanying printouts of all files on the disk. File names must clearly indicate the content of each file. The manuscript will be edited according to the style of the journal, and the proofs must be read carefully by the author. Disks that are not translatable or economical to process will not be used. The publisher reserves the right not to use the disk.

For further information on preparing disks for typesetting conversion, please contact the publisher (Editorial Supervisor, Journal Division, Academic Press, Inc., 525 B Street, Suite 1900, San Diego, California 92101-4495; telephone: (619) 699-6415; fax: (619) 699-6800).

Annals of Physics

Editor
Herman Feshbach
Massachusetts Institute of Technology, Cambridge

Assistant Editors
A. Dalgarno, Henry Ehrenreich,
Roman W. Jackiw, Arthur M. Jaffe

Annals of Physics presents original work in all areas of basic physics research. The journal publishes papers on particular topics spanning theory, methodology, and applications. Ideas are developed and fully explored, and thorough treatment is given to first principles and ultimate applications.

Annals of Physics emphasizes clarity and intelligibility in the articles it publishes, thus making them as accessible as possible. Readers familiar with recent developments in the field are provided with sufficient detail and background to follow the arguments and understand their significance.

Volumes 229–236 (1994), 16 issues

ADVANCES IN APPLIED MATHEMATICS

Editor

Gian-Carlo Rota
Massachusetts Institute of Technology, Cambridge

Interdisciplinary in its coverage, *Advances in Applied Mathematics* is dedicated to the publication of original and expository articles on all aspects of applied mathematics. Over the last ten years, *Advances in Applied Mathematics* has published research papers written by many of the foremost applied mathematicians of our time.

The journal emphasizes papers that represent a substantial advance in their field and features articles on:

- Discrete applied mathematics
- Statistics
- Mathematical biology
- Dynamical systems
- Algorithms
- Experimental mathematics
- Theoretical computer science

The journal is an excellent source of current information for:

- Mathematicians
- Computer scientists
- Applied mathematicians
- Physicists
- Statisticians
- Biologists

Volume 15 (1994), 4 issues
ISSN 0196-8858
In the U.S.A. and Canada: $172.00
All other countries: $214.00

Sample copies and privileged personal rates are available upon request.
